SOFTWARE AND AUGMENT TEAMS

by hustler engineers for awesome clients

111 __ XX 16 Altigee is a software development company fueled by ridiculously competent software development pros who are crazy about their job and hungry for challenges

DIGITAL SOLUTIONS

 \mathbf{I}

PoC, application re-engineering, cloud migration - you name it. We'll help you out with all of them.

Web or mobile app development,

AUGMENT TEAMS

The power to scale quickly, allocate rare professionals and assemble a dedicated team without side effects.

HOW WE DO IT

We identify your project requirements, the scope and deliverables. Then, we plan

DISCOVERY

the team size and structure.

After all the details are settled, we get down to designing wireframes, validating and

DESIGN

planning the deliverables.

DEVELOPMENT We set up a team to work on your project using the

Agile approach, constantly demoing the results to you.

LAUNCH Once the project is complete

and tested, we launch it, transfer code ownership to the client and provide further support

THE TRANSPARENCY YOU DESERVE LOAD TAKEN OFF

WHAT YOU GET

All of our processes are absolutely transparent: from team assembling

to software launching.

By delegating software development, you can focus on your primary

business activities.

YOUR SHOULDERS

You don't want to set up and maintain an entire software department to

NO IN-HOUSE SOFTWARE

DEPARTMENT

develop a single app.

Since every project has a manager on our side, you won't have to

micromanage the team.

PROJECT

THE GLOBAL MARKETPLACE FOR TRADE

Kountable is a startup with a mission to turn social capital into financial capital for entrepreneurs underserved by conventional banking.

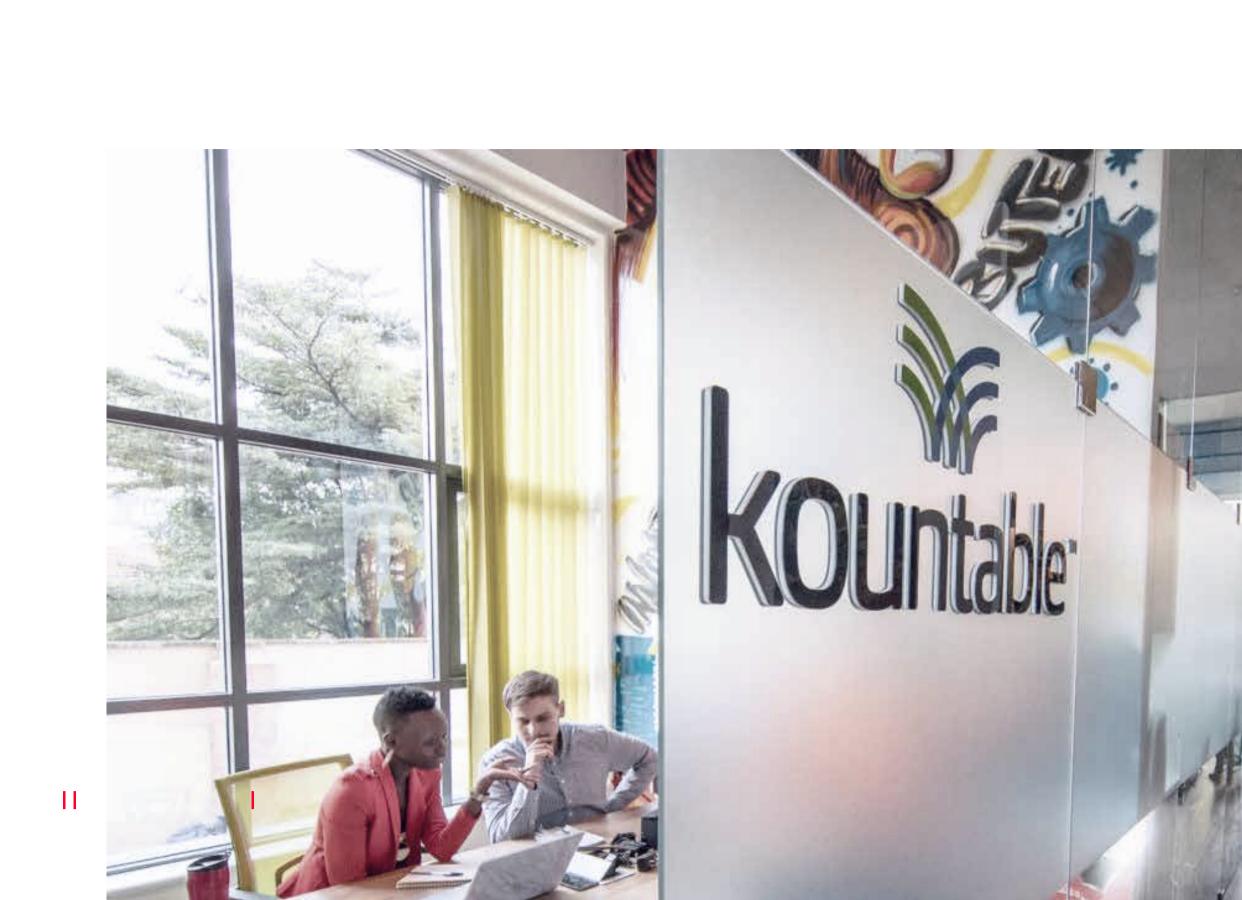

THE BEGINNING

Kountable's views and ideas appealed to us right away. And once we met with the startup's founders, we knew we wanted to participate in helping the African economy grow.

We started with a simple MVP of two web apps that let us define the business needs and test the solution against its audience. The MVPs were a success, so the customer decided they needed another web and 2 more mobile apps.

Ш Ш

With the number and complexity of the applications growing,

THE DESIGN SYSTEM

we needed a set of reusable components that would look and feel the same across all platforms and applications.

Our UI/UX team together with the front end and mobile engineers build a design system that saved hundreds of engineering hours and ensured the quality of the product. To support that initiative, we migrated our web apps from Angular to React.

Ш

On our visit to Rwanda and Kenya, we talked to the users and their feedback helped the app's UI improve significantly.

We also saw that the services were working way slower than we expected. The distance to the data center was to blame. So, we moved the infrastructure from the U.S. to Europe.

For that, we described our infrastructure in code using CloudFormation templates, Stacker and ECR Docker containers.

CI/CD TO THE RESCUE We aimed to achieve zero-downtime, bulletproof deploys.

Setting up a CI/CD deployment pipeline with blue-green deploys backed with autotest helped us reach that. Using monitoring tools like Grafana, Sentry and Sumo Logic, we controlled the applications' health and reacted to the potential problems before they became real issues.

Ш

Rwanda and Kenya are mobile-first countries, so it was important to deliver a mobile experience for their

MOBILE-FIRST AFRICA

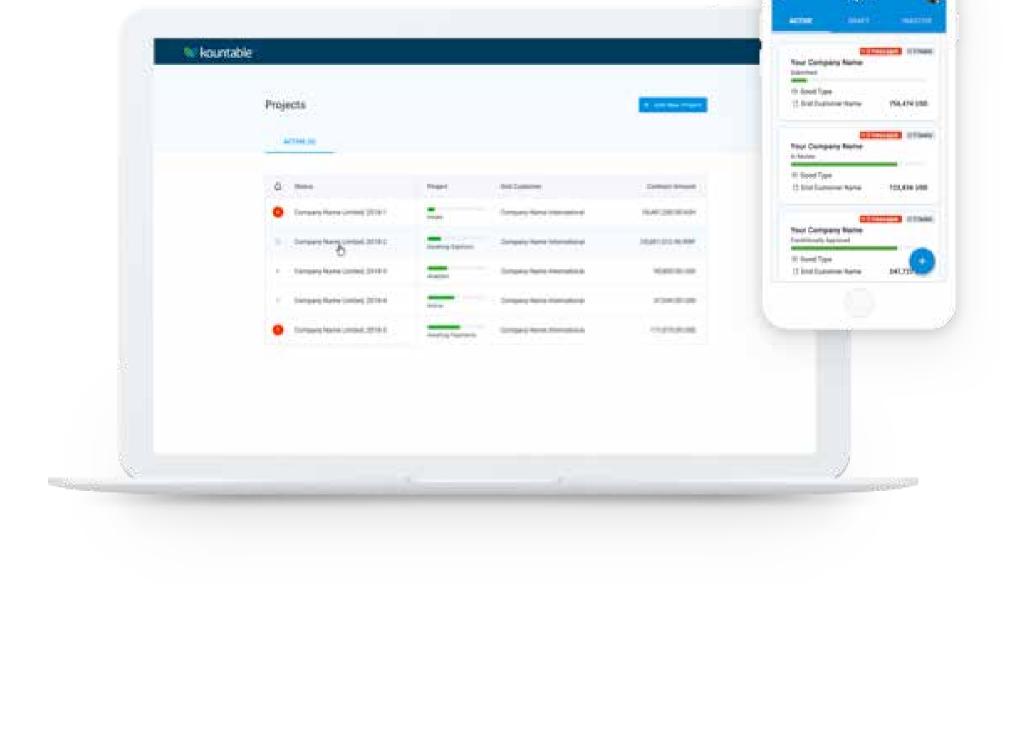

businesses. With that in mind, we needed to build a mobile app as quickly as possible. We went for an MVP using the IONIC framework and

delivered it within a month. The hybrid application was later replaced with native iOS and Android apps.

Ш

WHAT

3 React web applications a native iOS application

an MVP using Angular and IONIC

- a native Android application a custom design system
- microservice architecture using GoLang, Java and GraphQL AWS cloud-based infrastructure
- with Jenkins solutions monitoring with Grafana, Sentry and Sumologic

CI/CD and blue-green deploys

THE VALUE WE

- Assembling a team of tech pros quickly Delivering multiple solutions using the latest and most efficient tools in the tech stack
- Supporting the delivered solutions Integrating seamlessly with the on-site team thanks to a shared understanding of the customer's values

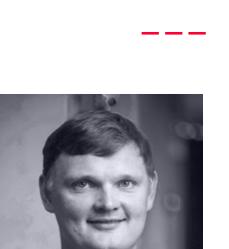

Building a long-term partnership with the customer

CLIENT

Andrey Kolesnikov

CTO, Kountable

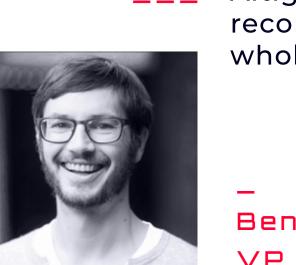

Many software development companies can deliver solutions, but few actually care about what you're doing and genuinely want to help reach your goal. I've been working with Altigee for two years now, and I know these are the guys you can trust.

Two years later, we're still passionate

about the solutions we've developed

together and their objectives.
